
Verified method specification
$M = (c, U, A, V, B)$;
orders and provenance
Operator-coefficient algebra
$\varphi_k(\sigma z)$, sums and compositions
Startup policy
initial state X_0
One generic EGLM engine
$X_n \longmapsto Y_i \longmapsto G_i \longmapsto X_{n+1}$
Adaptive
controller
h, action
tolerance
action requests
Optional selector
Auto / cal-
ibration
Matrix-function-action contract
$Q(hL)v$, optional fused $\sum_j Q_j(hL)v_j$
Work statistics
and diagnostics
Interchangeable numerical realizations
Diagonal Dense Full Arnoldi
KIOPS-style Real Leja SciPy/KIOPS hybrid
